Ways to Reduce Mowing Cost: Bahiagrass Seedhead Suppression
A Polycom Presentation
Wednesday, February 17, 2010
9:00—11:00 a.m.

This presentation is geared toward anybody responsible for maintaining either public or private areas that need mowing. It will be extremely beneficial to county departments and divisions including Roadway Maintenance; Parks and Recreation; Natural Resources. Mowing appears to be a necessary evil to control roadside weeds and common grasses. However, innovative use of herbicides as plant growth regulators have shown to effectively reduce bahiagrass seedheads for 8 to 16 weeks after application. Hence your mowing budgets could be reduced by 25% to 50% with this program.

Speaker:
Dr. Jason Ferrell, Extension Weed Specialist, University of Florida, Gainesville

Where:
Lee County Extension, 3406 Palm Beach Blvd., Fort Myers, 33916

Format:
A live video feed from the University of Florida, Gainesville. There will sufficient time for questions and answers.
