Topic: Slash Pines Topping

Question: I planted a couple of slash pines in our yard that are now about 4 feet tall, but they will grow into the flight path of our neighborhood ospreys that roost very nearby. Is there a way to top/shorten pines so they will not grow tall?
- Charles, Pine Island

Answer: There are no plant hormones that would keep a slash pine below its expected height. Pruning however is one way to do that. That would involve topping it while it is still short and pruning back the resulting shoots thereafter.
